

To Whom It May Concern:

I feel very strongly that the cost of new wireless networks should not be the reliability of GPS systems. The results of the testing have shown at best a fair risk of interference from the higher powered, ground based stations that Lightsquared has proposed.

GPS is a very important system, used by military, civilian and law enforcement around the nation. As an end user, I'm extremely concerned about the loss of capability for navigation in my aircraft. The cost to end users to 'upgrade' their units as Lightsquared has proposed is small for a car system. For aircraft however, the systems are in the tens of thousands of dollars to have installed, and not many folks can afford a whole new system.

Thanks,
Stephen Samuelian
